

Aggregates Recycling

Inert material makes up the bulk of construction and demolition waste.

Segregation of all recoverable materials helps maximise efficient use of these bulk materials. Reducing contamination and improving quality enables the high grade application of inert waste materials.

We collect and dispose of rubble and other waste concrete in the most environmentally friendly and cost effective manner.

Before we dispatch any equipment to collect material from a site, we work with the client to establish the nature of the material and the most appropriate means of disposal.

Different materials are dealt with in different ways to minimise their impact on the environment. Our expertise ensures such material is disposed of in the best interests of both our client AND the Environment.

We are able to collect and recycle hardcore and are able to offer the recycled product for sale for reuse in the building and construction industry.

ASH Waste Services offers a free no obligation site audit to ascertain your waste requirements, so we can tailor a waste collection service to meet the needs of your business.

Speak to a member of our sales team today on 01244 853071 to arrange your free audit.
